

## DOUBLE-LINK TYPE BRAKE PEDAL

This brake pedal is used a construction in which the brake pedal and brake pedal lever are jointed by a link to vary the lever ratio.

- When the pedal stroke is small or medium, the lever ratio is increased in order to reduce the pedal effort.
- When the pedal stroke is large, the lever ratio is decreased to provide ample pedal response.

## OFFSET TYPE PARKING BRAKE LEVER

An offset type parking brake lever is used to ensure a space on the console box. In consideration of serviceability, the double nuts for parking brake cable adjustment have been discontinued and replaced by an adjustment nut.
